                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The present sequence represents an Aspergillus terreus heat-resistant (thermostable) fructosyl amino acid oxidase (FAOD). FAOD can be produced using standard recombinant methodology. A recombinant fusion protein comprising FAOD and glutathione S-transferase (GST) is useful for the analysis of Amadori compounds
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     οĘ

cDNA library. The invention provides recombinant FAAO, DNA encoding the AFAO, an expression vector containing the DNA, a transformant transformed by the vector, and a method of preparing recombinant FAAO by culturing the transformant. The FAAO can be used in assays for, e.g. determination of anadori compounds such as glycated blood proteins, diagnosis and monitoring of diabetes or quality control of foods. (Updated on 17-OCT-2003 to standardise OS field)

The invention relates to compositions for assaying glycoprotein with use of protease and enzymes acting on glycoamino acids in the presence of at least 1 of deoxycholic acid or amide, cholic acid amide octyl glucoside, quaternary ammonium salt, quaternary ammonium salt cationic surfactant, concanavalin A and betaine and/or ascorbic oxidase and a buffer without a compositions for assaying albumin containing the protease and enzymes for determining glycoalbumin and a protein-denaturing agent and/or a compound proportion of albumin into glycoalbumin with respect to the other albumin measured separately. The compositions are useful in clinical examination including diagnosis and management of diabetes. The compositions can be used in methods which avoid the effects of globulin and ascorbic acid components and stabilise enzymes such as protease
                                                                                                                                                                                                                                                                                                                          Compositions for assaying glycoprotein without interference from globulin and ascorbic acid in blood, useful in clinical examination including diagnosis and management of diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  123 QYTPLNTAEDFRKTMPEGILTGNFPGWKGFYKPTGSGWVHARKAMKAAFESERLGVKF1 182

The invention relates to compositions for assaying glycoprotein with use of protease and enzymes acting on glycoamino acids in the presence of at least 1 of deoxycholic acid or amide, cholic acid amide octyl glucoside, quaternary ammonium salt, quaternary ammonium salt, quaternary ammonium salt, quaternary ammonium salt cationic surfactant, concanavalin A and betaine and/or ascorbic oxidase and a buffer without a 4-(2-hydroxyethyl)-1-piperazinyl group. The invention also relates to determining flycoalbumin and a protein-denaturing agent and/or a compositions for assaying albumin containing the protease and enzymes for determining glycoalbumin and a protein-denaturing agent and/or a compound having S-S bond and bromocresol purple for evaluation of glycation proportion of albumin into glycoalbumin with respect to the other albumins measured separately. The compositions are useful in clinical examination including diagnosis and management of diabetes. The compositions can be used in methods which avoid the effects of globulin and ascorbic acid components and stabilise enzymes such as protease
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Compositions for assaying glycoprotein without interference from globulin and ascorbic acid in blood, useful in clinical examination including diagnosis and management of diabetes.

4-(2-hydroxyethyl)-1-piperazinyl group. The invention also relates to compositions for assaying albumin containing the protease and enzymes for determining glycoalbumin and a protein-denaturing agent and/or a compound having S-S bond and bromocresol purple for evaluation of glycation proportion of albumin into glycoalbumin with respect to the other albumins measured separately. The compositions are useful in clinical examination including diagnosis and management of diabetes. The compositions can be used in methods which avoid the effects of globulin and ascorbic acid components and stabilise enzymes such as protease acting on glycoamino acids. This sequence represents a polypeptide used in the scope of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                임
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to compositions for assaying glycoprotein with use of protease and enzymes acting on glycoamino acids in the presence of at least 1 of deoxycholite acid or amide, cholic acid amide octyl glucoside, quaternary ammonium salt cationic surfactant, concanavalin A and betaine and/or ascorbic oxidase and a buffer without a 4-(2-hydroxyethyl)-1-piperazinyl group. The invention also relates to compositions for assaying albumin containing the protease and enzymes for determining glycoalbumin and a protein-denaturing agent and/or a compound having S-8 bond and bromocresol purple for evaluation of glycation proportion of albumin into glycoalbumin with respect to the other cambinism measured separately. The compositions are useful in clinical examination including diagnosis and management of diabetes. The compositions can be used in methods which avoid the effects of globulin and ascorbic acid components and stabilise enzymes such as protease acting on glycoamino acids. This sequence represents a polypeptide used in the scope of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Compositions for assaying glycoprotein without interference from globulin and ascorbic acid in blood, useful in clinical examination including diagnosis and management of diabetes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     "Wild-type Lys substituted by Trp. Encoded by TTG"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           셤
                     The invention relates to a novel fructosylamine oxidase isolated from Fusarium proliferatum. The enzyme has the following physiochemical characteristics: (a) activity against fructosyllyshine equivalent to or higher than that against fructosylvaline; (b) optimum pH for enzyme activity of 7.5; (c) enzyme stability optimally at 30-40 deg C; and (d) a molecular weight of about 39 kDa as measured by SDS-PAGE and about 39.4 kDa by gel filtration. Also disclosed is a similar Fructosylamine oxidase characterized by: (i) activity against fructosylvaline and no detectable activity against fructosylvaline mpH for enzyme activity of 7; (iii) enzyme stability optimally at 30-40 deg C; and (iv) a molecular weight of about 49 kDa as measured by SDS-PAGE and about 58 kDa by gel filtration. The oxidases are useful in the measurement of Amadori compounds and particularly applicable in medical examination including compounds and particularly applicable in medical examination including for treatment and prevention of diabetes by controlling serum glucose level for treatment and prevention of complications, and in food inspection. This sequence represents the fructosylamine oxidase designated Q2.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        for
                                                                                                                                                                                                                                                                                                                                            Novel fructosylamine oxidase protein, useful for spectroscopic analysis of fructosylamine compounds, and electrochemical analysis of fructosylamine and fructosyl valine compounds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  232 PTAWTLVHIALKPEERALYKNIPVIFNIERGFFFEPDEERGEIKICDEHPGYTNMVQSAD
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The present invention relates to fructosylamine oxidase protein (I; ADS1571) and its coding sequence (II; ADS1572) from Pichia sp. preferably Pichia sp. N1-1 strain. (I) is useful for spectroscopic analysis of fructosylamine compounds, and electrochemical analysis of fructosylamine compounds, and electrochemical analysis of analyzing fructosyl valine by spectroscopy, which involves degrading HDAIC, fructosyl valine by spectroscopy, which involves degrading HDAIC, fructosyl valine or fluctosylamine, respectively. (I) is also useful for carrying out electrochemical analysis of HDAIC, fructosamine, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                7 SLLIVGAGTWGTSTALHLARRGYTNVTVLDPYPVPSAISAGNDVNKV----ISSGQYSN

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         26
                                                                                                                                                                                                                                                                                        Ä.
                                                                                                                                                                                                                                                                                                                                                The present invention relates to a DNA sequence (I, ADE81173), which is associated with ML-236B synthesis. (I) is useful for improving ML-236B production in a HMG-COA reducing—enzyme-inhibitor ML-236B producing microbe. The present sequence was used to illustrate the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                RVRPGEDPNLVELTRPEOFRKLAPEGVLOGDFPGWKGYFARSGAGWAHARNALVAAAREA

This sequence represents the fructosyl amino acid oxidase (FAOD-P) of the invention. This sequence was isolated from Penicillium janthinellum S-3413 (FERM BP-5475). FAOD-P oxidises amadori compounds in the presence of oxygen, producing alpha-ketoaldehyde, amine derivatives and hydrogen peroxide. FAOD-P is used in the detection of amadori compounds in, e.g. foods such as soy sauce, and in body fluids such as blood. This sequence, vectors containing it and host cells transformed by the vector are all used for the recombinant production of FAOD-P.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    61 NNKDEIEVNEILAEBAFNGWKNDPLFKPYYHDTGLLMSACSQEGLDRLGVRVRPGEDPNL 120

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence represents a fructosylamino acid oxidase (PAOD-P), and is encoded by a synthetic sequence. The the wild type FAOD-P sequence is derived from Penicillium janthinellum S-3413. The synthetic sequence was constructed using primers AAX15951-6006

The present sequence is the protein sequence of a novel fructosyl peptide oxidase (PPD) of Eupenicillium terrenum ATCC18547. FPO enzymes of the invention act on fructosyl valyl histidine in the presence of oxygen and catalyse a reaction that produces alpha-ketoaldehyde, valyl histidine and hydrogen peroxide. The E. terrenum FPO exhibits 182% relative activity for fructosyl gyroine and 9.78% for egsilon fructosyl lyapsine when compared to 100% activity for fructosyl valyl histidine. It shows optimal activity in the pH range 6.0-8.0 (preferably pH 7.0) and at temperatures around 35 degrees C, and is stable in the pH range 5.0-9.0 and at temperatures temperatures up to about 45 degrees C. The Km value for fructosyl valyl histidine is 4.25 mM. The E. terrenum cDNA can be used for mass
                                                                                                                                                                                                                                                                    284

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
